

## Fall Meeting 2005

### Solomon Users Group Fall Meeting 2005

Another successful meeting of the Solomon Users Group for Contractors was held on October 20-21, 2005 at Bally's Hotel in Las Vegas.

This was the seventh meeting of the Solomon Users for Contractors since inception in 2002, with over 40 companies representing organizations from 6 users to over 200 users in the Solomon system. The agenda included a range of presentations for users with varying levels of Solomon fluency, from Basic Customization to Creating SQL Views and using FRx Forecaster.

SIS founded the Solomon Users Group for Construction in 2001 as a means of helping Solomon users take advantage of all the efficiencies that they expect from their implementations. The Users Group creates a unique opportunity for Solomon Construction customers, with a forum for networking, information sharing, and issue exchange with direct support from SIS and Microsoft. Participants are also afforded the opportunity to provide feedback on enhancements directly to Microsoft.
